Photovoltaic Isolators

The Photovoltaic Isolator (PVI) generates an electrically isolated DC voltage upon receipt of a DC input signal. The PVI is ideally suited for driving power MOSFETs, IGBTs or sensitive gate SCRs to form solid state relays.

HexFred Diodes

HEXFRED technology sets a new standard for high performance ultrafast diodes. This performance advantage can be utilized by the designer resulting in higher efficiency circuits and lower overall system cost. HEXFREDS will: • Allow IGBTS and MOSFETS to run cooler by 10°C, 20°C • Improve overall system efficiency by 1%, 2% • Reduce noise and the need for snubber circuitry • Allow for higher frequency operation • Allow many marginal circuits to work more reliably

FAIRCHILD SEMICONDUCTOR®

Surface Mount and Through-Hole Power IGBTs

Fairchild's IGBT's are designed to replace 500V/600V MOSFETs in switch mode power supply (SMPS), Power Factor Correction (PFC) and other high-power applications without redesign of the gate drive voltage circuitry. SMPS IGBT's are the first-in-class to have full unclamped inductive switching (UIS) capability similar to power MOSFETs, allowing application in all power circuit topologies, including single-switch forward converters. The gate drive voltage requirement has been reduced to 8-10V, allowing for the replacement of larger die-size power MOSFETs or multiple MOSFETs in parallel.

Ignition IGBTs

Fairchild ignition IGBTs are the next generation that offers outstanding SCIS capability in the space saving D-PAK (TO-252) as well as the industry standard D2-Pak (TO-263), TO-262 and TO-220 plastic packages. This device is intended for use in automotive ignition circuits, specifically as a coil driver. Internal diodes provide voltage clamping without the need for external components.

SCRs: General Description: Crydom SCRs (CYN Series) are available in 16A and 25A ratings, up to 1,000V. They are suitable for general purpose AC switching applications for industrial equipment, welders and capacitive filter soft start (Inrush current control) applications. Suitable for most general purpose power switching applications and has been used in literally thousands and thousands of power circuit applications. **Specifications:** Vgt(maximum): 1.3V; Vgd(minimum): .2V; Non Repetitive Surge Peak On-State Current: 50Hz-320A, 60Hz-350A; dv/dt MINIMUM: 1000v/uS Operating Temperature Range: -40°C ~ 125°C UL File E72445

Rectifier Diodes: General Description: The Rectifiers (CRNA and CRNB Series) are available in 15A, 20A and 25A ratings, up to 1,000V. They offer exceptional full cycle non-repetitive surge peak on-state current ratings ranging from 225A to 350A. Use for power rectification of AC voltages to DC voltages. Also, use for battery isolation applications and freewheel diode applications for voltage surges. **Specifications:** Vfm: 1.1V; Non Repetitive Surge Peak On-State Current: 50Hz-188A, 60Hz-225A; Operating Temperature Range: -40°C ~ 125°C UL File E72445

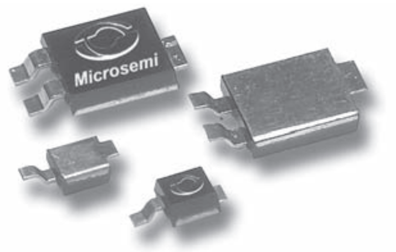
Microsemi Corporation is a world leader known for its ability to build quality, state of the art discrete products with a longevity in the market place.

Specializing in Transient Protection, Power Conditioning and Packaging, Microsemi is more than just solutions, we enable Possibilities!

Powermite Package

1/3 the Size of SMA!



Microsemi's Powermite Product Division is a world leader in providing high density discrete solutions.
This patented technology provides size retrained designed with more options.

Features:

Built in Heatsink

- The patented "full-metal-bottom" design provides the optimal heat path for dissipating junction heat handling up to 2 Amps!

Solder Wickability

- The patented interlocking construction incorporates a path for solder to "wick" up the side of the package and enhance the power dissipation

Space Saver

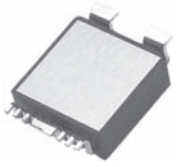
- These 2 leaded devices are 1/3 the size of comparable rated devices

Flexible Package for Custom Product (Max. die size 110mm x 110mm)

- Microsemi offers Schottkys, Ultrafast Rectifiers, MOSFETs, SCR's and Schottky+FET combinations

Synchronous Rectifier Module (SRM4010)

Is a complete solution for implementing a very high efficiency Synchronous Rectification and eliminates many of the problems with self driven approaches.



Features:

- Rectification Efficiency 95% at output voltages of 5V down to 1V
- Able to handle large sudden changes in duty cycle
- Robust package with copper plate for excellent heat dissipation
- Operates at PWM frequencies ranging from 200-400KHz

TVS Devices

Microsemi has the largest offering of TVS devices: 12,000 devices! These devices are perfect to safeguard your components from voltage spike originating from electrostatic discharge (ESD), induced lightning and inductive load switching.

Just Pick Two:

All you need to know is 2 of the following 3 specs to find the part you need!

Vwm - Standoff Voltage:

Maximum working voltage at which the device is intended to operate. *Typical 3V, 5V, 12V, 15V, 24V. VWM is 10% below VBR.*

Vbr - Breakdown Voltage:

Voltage at which device goes into hard conduction or *avalanche* breakdown.

Vc - Clamping Voltage:

Maximum voltage appearing across TVS at Peak Pulse Current (IPP). *VC is typically 20% higher than VBR.*

High Speed Data Line Protectors

Provide voltage Spike Protection for Data and Telecom, I/O Ports originating from ESD, EFT and Induces Lightning

USB6B1	**500W, 8/20 us**
SMP6LCxx	**600W, 10/100 us**

USB Protection: 3 in 1

USB Line Termination + EMI Filtering + ESD Protection =

LX7201: Downstream SOT-23-6
LX7202: Upstream SOT-23-6
LX7203: Upstream SC70

The LX7201/2/3 family is an integrated USB line termination device with EMI filtering and ESD protection diodes. The 15kΩ pull-down resistors on the LX7201 identify the lines for downstream operation. The 1.5kΩ pull-up resistors on the LX7202 and LX7203 identify the appropriate data line for full and low speed upstream operation. The 47pF capacitor completes the high frequency filter and controls the edge rate of the USB signals. These devices protect both D+ and D- data lines and the voltage bus from ESD. All devices meet IEC61000-4-2, level 4, 15kV (air discharge) and 8kV (contract discharge). The LX7201, LX7202 and LX7203 are ideal for use in USB hubs, peripherals and portable appliances.

Alternistor Triacs 8 to 40 Amps

General Description: Teccor's Alternistor Triac has been specifically designed for applications which are required to switch highly inductive loads.
To accomplish this, a special chip has been designed which effectively offers the same performance as two thyristors (SCRs) wired inverse parallel (back-to-back), hence, the alternistor has better turn-off behavior than a standard triac. All Alternistors have glass passivated junctions to ensure long term reliability and parameter stability.

Bilateral Trigger Diacs HT and ST Series

General Description: The diac semiconductor is a full-wave or bi-directional thyristor. It is triggered from a blocking-to-conduction state for either polarity of applied voltage whenever the amplitude of applied voltage exceeds the breakover voltage rating of the diac.
The line of diacs features glass passivated junctions to ensure long term device reliability and parameter stability. Glass offers a rugged, reliable barrier against junction contamination.

Specifications: • Maximum Ratings, Absolute-Maximum Values • Maximum Trigger Firing Capacitance – 0.1µF; Device dissipation (at T_A = -40°C ~ 40°C) – 250mW; Derate Above 40°C – 3.6mW/°C • Temperature Ranges: Storage -40°C ~ 125°C; Operating (Junction) -40°C ~ 125°C • Thermal Resistance: Junction to Ambient ($R_{\theta JA}$) = 278°C/W (DO-35); Junction to Lead ($R_{\theta JL}$) = 100°C/W (DO-35); 65°C/W (DO-214AA) based on maximum lead temperature of 85°C (DO-35) and 90°C (DO-214AA)

Sidacs

General Description: The Sidac is a silicon bilateral voltage triggered switch with greater power-handling capabilities than standard diacs. Upon application of a voltage exceeding the Sidac breakover voltage point, the Sidac switches on through a negative resistance region to a low on-state voltage. Conduction will continue until the current is interrupted or drops below the minimum holding current of the device.

Applications:
• High voltage lamp ignitors • Natural gas ignitors • Gas oil ignitors • High voltage power supplies • Xenon ignitors • Over voltage protector • Pulse generators • Fluorescent lighting ignitors • HID lighting ignitors
Features: • AC circuit oriented • Glass passivated junctions • High surge current capability

General Notes:
• All measurements are made at 60Hz with a resistive load at an ambient temperature of 25°C unless otherwise specified • Storage temperature range (TS) is -65°C ~ 150°C • Junction temperature range (TJ) is -40°C ~ 110°C • Lead solder temperature is a maximum of 230°C for 10 seconds maximum; ≥ 1/16" (1.59mm) from case.

TECCOR. The New Standard in Thyristors for Electronic Equipment

Littelfuse®

Sensitive Gate (0.8-10 Amps) and Non-Sensitive Gate (1-70 Amps) SCRs

Thyristor SCR semi-conductors are half-wave, unidirectional, gate-controlled rectifiers. Both Sensitive Gate and Non-Sensitive Gate SCRs in a choice of 3 different electrically isolated packages and 5 non-isolated packages. Electrically Isolated Packages: The electrically isolated packages isolate the case or tab internally to allow the use of low cost assembly and convenient packaging techniques. Teccor offers electrical isolation in the TO-92, TO-220AB, and TO-218 type packages. Glass Passivation: SCRs feature glass passivated device junctions to ensure long term device reliability and parameter stability. Glass offers a rugged, reliable barrier against junction contamination.

Sensitive Gate Type: The sensitive SCR semiconductors complement the line of power SCRs. **Features:** • Current Ratings: 0.8-10 Amps • Voltage Ratings: 30-600 Volts • Gate Sensitivities: 12-500 microamps • Surge Current: up to 100 Amps

Non-Sensitive Gate Type: The thyristor SCR semiconductors complement the line of sensitive gate SCRs. **Features:** • Current Ratings: 1-70 Amps • Voltage Ratings: 100-800 Volts • Gate Sensitivities: 10-50 milliamps • Surge Current: up to 950 Amps

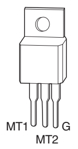
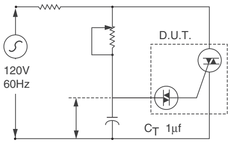
QUADRAC® Internally Triggered Triacs (4.0-15 Amps)

Thermotab TO-220AB (Isolated)





General Description:
QUADRAC® is a triac that includes a diac trigger mounted inside the same package. This device saves the user the expense and assembly time of buying a discrete diac and assembling in conjunction with a gated triac.
The QUADRAC® is a bidirectional AC switch and is gate controlled for either polarity of main terminal voltage. Its primary purpose is for AC switching and phase control applications such as speed controls, temperature modulation controls, and lighting controls.

Features: • Glass passivated junctions • Electrically isolated package • Internal trigger diac • High surge capability - up to 150 Amps • High voltage capability - 200 up to 600 volts • IDRM @25°C: .05mA • VTM @25°C: 1.6V • Capacitance: 0.1µF • tgt: 3µsec.

Electrical Isolation: Isolated TO-220 Quadrac package will withstand a minimum high potential test of 2500VAC (RMS) from leads to case over the operating temperature range of the device.

Electrical Isolation From Leads to Case:

Notes:

- Frequency Stability for ECS-3953C, ECS-3953M, ECS-3951C, and ECS-3951M Series inclusive of 25°C tolerance, operating temperature range, input voltage change, load change, aging, shock, and vibration
- For the Enable/Disable Function in the ECS-3953C, ECS-3953M, ECS-3951C, and ECS-3951M Series, an internal pullup resistor from Pin 1 to Pin 4 allows active output if Pin 1 is left open. A 0.01µF bypass capacitor should be placed between (V)DD (Pin 4) and) GND (Pin 2) to minimize power supply line noise.

Specifications:

- **Enable/Disable Time:** 100ns max. • **Output Symmetry:** 40 ~ 60% • **Storage Temperature:** -55°C ~ 125°C • **Output Current (IOL) VOL=0.5/0.33V (IOH) VOL=4.5V/2.97V:** 4mA IOL; -4mA IOH

ECS INC. INTERNATIONAL Through-Hole Quartz Crystals

Fig. 1

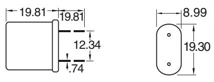

Fig. 2

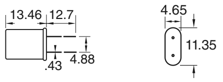

Fig. 3

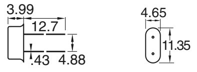

Fig. 4

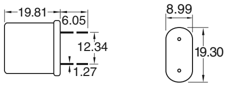

Series resonance appears resistive in the circuit and impedance at f_S is at its minimum value. Unless load capacitance is specified, all crystals are manufactured at series resonance. When a crystal is operating at parallel resonance (fL) it will look inductive in a circuit. Crystal frequency varies depending on the value of load capacitance. The load capacitance is the dynamic capacitance of the total circuit as measured or computed across the crystal terminals. Always specify the load capacitance if the crystal will be operated in the parallel mode.

Parabolic Temperature Curve

To determine frequency stability, use parabolic curvature. For example: What is the stability at 45ºC?
(1) Change in T (ºC) = 45 - 25 = 20ºC
(2) Change in frequency
= 0.04 PPM x (ΔT)
= 0.04 PPM x (20)
= -16.0 PPM

Programmable Oscillators

The ability to create a custom oscillator to certain specifications provides engineers with a great deal of flexibility. They allow for last minute changes in circuitry or design. ECS Blanks are “Twice Programmable”. This is a cost saving feature which allows you to reprogram the same part to different specifications. ECS Programmable Oscillators are available in four different package styles: 3.2 x 5.0 SMD, 5.0 x 7.5 SMD, Half Size Dip and Full Size Dip Package. Frequency ranges are available from 1MHz ~ 125MHz in 3.3V and 1MHz ~ 150MHz in 5V* and in ±50ppm** and ±100ppm Frequency Stability Options.

*3.2 x 5.0 SMD package: Frequency range 1MHz ~ 125MHz in 5V.

**±50ppm not available in Extended Temperature Range Option.

CARDINAL COMPONENTS, INC.

FIPO™ Field Instantly Programmable Oscillators

The FIPO system from Cardinal is indispensable for such things as prototypes, early stage design, unexpected design problems, modification, immediate service, a sudden ramp in production and volume production. Cardinal Oscillator Blanks are "Twice Programmable" to correct errors or to reuse the same part for two separate applications with different frequency and/or different output characteristics without having to dispose of the original part.

Oscillator Blanks are available in four different package styles: Full Size 14 Pin Dip, Half Size 8 Pin Dip, 5x7 Ceramic SMD, and a Plastic SMD package.
Frequency ranges are available from 1MHz ~ 133MHz in 5V and 1MHz ~ 100MHz in 3.3V and in ±100ppm, ±50ppm and ±25ppm frequency stability options.

	Function
T	Tri-State
P	Power Down

Tri-State Mode – The output of the part is weakly pulled low when the control pin goes low. The active circuitry continues to operate, allowing a rapid return to normal operation when the control pin goes high.

Power Down Mode – When the control pin goes low, all active circuitry on the chip within the oscillator is shut down. For reactivation, time in which the part regains its output is minimal.

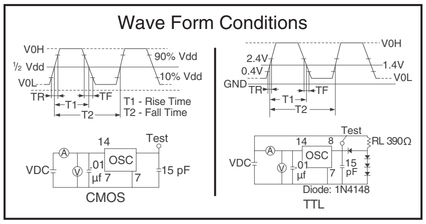
CTS® MXO45 Clock Oscillators

Standard Output

• Frequency Tolerance: ±100ppm, 0°C ~ 70°C • CMOS compatible • Fully hermetically-sealed package • 8/14-pin compatible • Drives up to 10 standard TTL Loads • Input Voltage: +5V DC ± .5V



Tri-State Output

Tri-State Logic uses the two standard logic levels of high (logic 1) and low (logic 0) but has added a third state that is not a logic level but an open circuit condition that effectively disconnects the output from your circuit with a high impedance (floating) state, thereby enabling the use of numerous oscillators on the same bus line. Also, by using the enable pin to control the output, the crystal is still running even when the output is disabled (stand-by mode), thus eliminating any start-up time for the oscillator. **CTS HCMOS/TTL** products utilize an Application Specific Integrated Circuit (ASIC) design strategy. Employing a single design family supporting both HCMOS/TTL applications helps in reducing costs and lead times. Utilizing ASIC technology reduces the number of components inside the XO (crystal oscillator), thus increasing reliability and further reducing cost.

Features: • CMOS/TTL compatible • Drives up to 10 standard TTL loads • 100ppm tolerance • Tri-State output • Fully hermetic resistance weld package

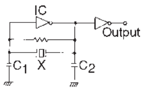
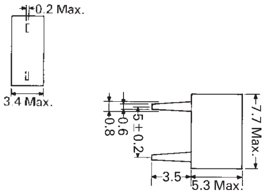
TOKO Ceramic Resonators - Surface Mount



Output	
IC	1/5µ - PD4069
VDD	+5V
X	Ceramic Element
C1, C2	Capacitors



Features:

TOKO ceramic resonators utilize the piezoelectric principle converting a mechanical force (stress) into an electrical signal or converting an electrical signal into a mechanical force.

The ceramic resonator is a thin section of piezoelectric ceramic material, such as quartz, whose sides are metallized into a corresponding pair of electrodes and upon the application of current produce a lengthwise vibration.

Note (1): Open Circuit Inductance Test Parameters: 100kHz, 0.250Vrms, 0.0 Adc. **Note (2):** RMS current for an approximate ΔT of 40°C without core loss. It is recommended that the temperature of the part not exceed 125°C. **Note (3):** Peak current for approximate 25% roll off at 25°C. **Note (4):** DCR limits 20°C **Note (5):** Applied Volt-Time product (V-µS) across the inductor at 100kHz necessary to generate a core loss equal to 10% of the total losses for 40°C temperature rise.

Note (1): Open Circuit Inductance Test Parameters: 100KHz, 0.250Vrms, 0.0 Adc Parallel (1,2-4,2) Series: (1-4) tie (2-3) **Note (2):** RMS current for an approximate ΔT of 40°C without core loss. It is recommended that the temperature of the part not exceed 125°C. **Note (3):** Peak current for approximately 30% roll off at 20°C. **Note (4):** DCR limits at 20°C **Note (5):** Applied Volt-Time product (V-µS) across the inductor. This value represents the applied V-µS at 100kHz necessary to generate a core loss equal to 10% of the total losses for a 40°C temperature rise.

OCL @ -40°C can be lower than OCL @20°C by 15% max. **Note (2):** Irms: DC current for an approximate DT of 40°C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed 125°C under worst case operating conditions verified in the end application. **Note (3)**: Isat1: Amperes Peak for approximately 30% rolloff (@25°C).

Note (1): L_{BASE} = Nominal Inductance of a single winding. **Note (2):** I_{BASE} = is the lesser of $I_{SAT(BASE)}$ and $I_{RMS(BASE)}$ **Note (3):** Peak current that will result in 30% saturation of the core. This current value assumes that equal current flows in all six windings. Saturation current per winding may be calculated as follows: ISAT = 6 x $I_{SAT(BASE)}$/Number of windings driven. **Note (4):** IRMS current that results in a surface temperature of approximately 40°C above ambient. The 40°C rise occurs when the specified current flows through each of the six windings. **Note (5):** For multiple windings in series, the volt-µsec TOTAL (µVs) capability varies as the number of windings in series (S): Volt-µsec TOTAL = S x Volt-µsec(BASE). For multiple windings in parallel, the Volt-µsecond TOTAL (µVs) capability is as shown in the table above. ***§ Bulk***

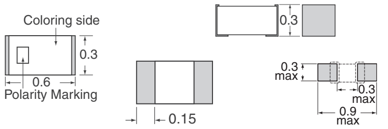
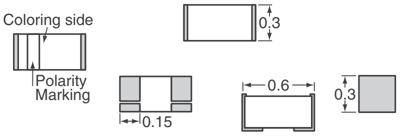
Chip Coils Monolithic and Film Type SMD

LQP03T Series



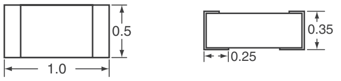
Murata's original thin film technology contributes further to miniaturizing high performance equipment because the size is small and the Q-value is high.

LQP03T_04 Series



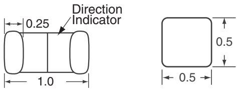
Ultra small 0201 size. Q value of some items has been heightened and direction indicator has been enabled. This enables easy impedance at matching RF and IF circuits, and high frequency designing. Highest class Q characteristics.

LQP15M Series



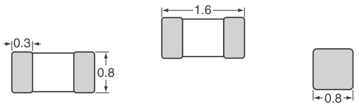
Features: • Tight inductance tolerance • Ultra small size 0402 inductor, low profile and lightest weight in the world, enables miniaturization of mobile telecommunication equipment • Weight: LQP15M Series 0.61mg/pcs. multilayer film type inductor 0.94mg/pcs

LQG15HS Series



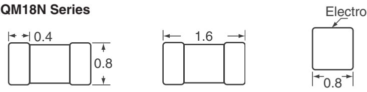
Chip inductors specifically designed for high frequency applications. They are designed to realize stable characteristics in high frequency range applying integrated multilayer process. Integrated multilayer process enables a wide range of inductance values with tight tolerance.

LQM18F Series



Special ferrite material, whose inductance change caused by bias current is small, enables large rated current of 50mA at 10 micro H. Magnetically shielded structure enables good crosstalk characteristics.

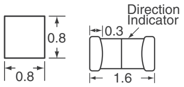
LQM18N Series



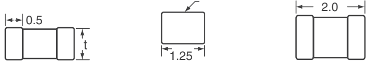
Magnetically shielded chip coils were developed by using original multilayer process technology and magnetic materials. Compact size is suitable for high density mounting. Shielded construction is not affected by interference from peripheral components.

LQG18H Series

Designed to realize stable characteristics in high frequency range applying integrated multilayer process. Monolithic air core.



LQM21D Series



Consists of magnetically shielded chip inductors. It has less than half the DC resistance of our conventional monolithic chip inductors as well as high inductance. Monolithic design.

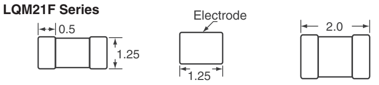
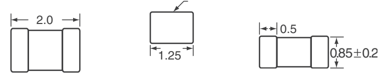
Chip Coils Monolithic and Film Type SMD *(Cont.)*

LQM21F Series



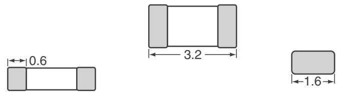
Suitable for power line choke because of its excellent direct current characteristics. The series has larger rated current (60mA at 10 micro H) than conventional rated current. Monolithic ferrite core.

LQM21N Series



Consists of magnetically shielded chip inductors developed using Murata's original multilayer process technology and magnetic materials. The miniature size of 2.0mm x 1.25mm enables compact design of electric equipment.

LQM31P Series



Features low DC resistance and magnetically shielded structure. Outstanding solder heat resistance. Either flow or reflow soldering methods can be employed.

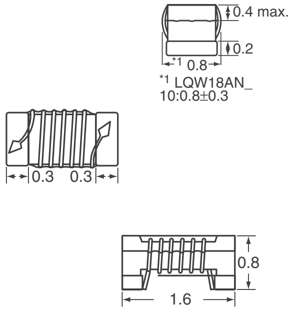
Consists of air core chip coil using a miniature alumina core. Has high Q value and high self resonant frequency in high frequency range. Suitable for high frequency circuits which are used in telecommunication equipment.

LQW18A Series



Horizontal winding structure enables tight inductance. High self resonant frequency realizes high-Q value and stable inductance at high frequency. Low DC resistance design is ideal for low loss, high output and low power consumption.

LQH32M Series

Consists of miniature chip inductors wound on a special ferrite core. High Q value at high frequency and low DC resistance.

Common Mode Choke Coils Wound Type, Film Type and Film Type Arrays

DLW21H Series: Excellent noise suppression for limited board space applications. Suitable for differential signal line like USB2.0, IEEE1394 and LVDS. DLW21H does not provide distortion to high speed signal transmission due to its high coupling. (USB2.0:DLW21HN900SQ2).

DLW31S Series: High common mode impedance at high frequency provides excellent noise suppression performance. DLW31S series enables noise suppression for differential signal line without distortion in high speed signal transmission due to its high coupling. Small dimension enables higher density mounting.

DLW5BS Series: High performance wound type chip common mode choke coil. Its high impedance characteristic enables great noise suppression, but it does not damage high speed signal due to low normal mode impedance.

DLW5BT Series: Suitable for noise suppression at DC power line and portable equipment. Low profile. Small size and high rated current. High common mode impedance.

DLP31S Series: Has excellent performance at high frequency range. Suitable for differential signal line like USB, because DLP31S does not provide distortion to high speed signal transmission due to its high coupling (coupling coefficient: 0.98 minimum)

DLP31D Series: Utilizing ferrite materials and thin film technology, this common mode choke coil array has high impedance characteristics all packaged in a small case size. 2 components are included in 3.2 x 1.6mm. DLP31D can suppress common mode noise without damage to signal wave.
